

1) Progress made thus far

- Given the correct specific department of University, we are able to recognize correct faculty directory pages using classifiers.
- Extract faculty web pages according to different directory pages.

2) Remaining tasks

- Given correct Faculty pages, we still need to get useful information using some textual information retrieved methods.
- Integrate all the code for different parts
- Preparing a short presentation for the overall project

3) Any challenges/issues being faced

- Since faculty directory pages are different among different departments, do we need to identify all departments' faculty directory pages given a University website, or particular department website will be given.
- Since we are using classifiers to classify the correct website pages, we cannot ensure 100% accuracy on all the University.
